

Yelena Migirova

Licensed medical esthetician and skincare expert with over 20 years of experience!

Yelena's fascination with aesthetics sparked at a young age. As she observed her older sister wearing makeup, she was constantly experimenting with makeup, trying out new techniques and styles. Throughout her adolescence, dealing with acne issues motivated her to try out various ingredients and craft homemade facial masks. Hence, a skincare artisan was born!

Yelena spent her early career days as a makeup artist, yet she desired greater challenges, more dramatic results and wanted to learn more about advanced aesthetics. She pursued her education in medical esthetics, and after completing rigorous training and education, she obtained her professional licensure as a medical esthetician. Over the years, Yelena has earned a solid reputation in the industry for her expertise in the most advanced aesthetic treatments and skincare products, her honest and compassionate approach to skincare treatments, and her commitment to delivering exceptional care and beautiful results for her clients.

At Triangle Facial Plastic Surgery, Yelena specializes in delivering personalized anti-aging skincare solutions. These range from facials and peels to laser and energy treatments, all meticulously tailored to the unique requirements of each client. Her primary focus is on establishing trust with her clients, comprehending their individual concerns, and creating personalized treatment strategies to enable them to look and feel their best. She is dedicated to ensuring that all her clients feel at ease and well-informed during their skincare journey.

Yelena loves collaborating with Dr. Becker to bring out the most beautiful, long lasting and natural looking results for the patients at TFPS. Some of her favorite treatments & devices include: laser skin resurfacing, radiofrequency technology, microneedling, chemical peels, facials and light therapy. She takes pleasure in ongoing education and staying updated on the latest advancements in technology and devices, enabling her to accurately diagnose skin conditions, develop personalized treatment plans for her patients and rejuvenate their confidence.
